DATE MAILED: 11/19/2003

13

Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

09/287,402

Applicant(s)

CRINON, REGIS J.

Examiner

Hai Tran

Art Unit

2611

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 25 August 2003.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-14 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-14 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

**Priority under 35 U.S.C. §§ 119 and 120**

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other:

### **DETAILED ACTION**

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 08/25/03 has been entered.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-14 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-4, 6-7, and 9-10 are rejected under 35 U.S.C. 102(b) as being unpatentable by Adams et al. (US 5541662).

Regarding claim 1, Adams discloses a method of displaying (Fig.8) a document (associated data/Buttons with images of related items for sale) together with a time stamp (Fig. 5, el. 84) specified display of video element (Fig.8, Video Windows) comprising the steps of:

Providing the document (Associated Data) including a structure (Fig. 5) for receiving a time stamp value (Fig. 5, el. 84) associated with the video element (video Packet) in a packetized elementary stream (Fig.5; Col. 4, lines 34-65);

Reading the time stamp value in the document (associated Data) and at least one of providing and signaling the availability of document (by displaying the Buttons with images of related items for sale) to a viewer in accordance with the time-stamp value (Col. 8, lines 51-63).

As to "inserting said time stamp value said associated with said video element in said structure", Adams does not specifically disclose it; However, Adams shows the Associated Data's structure with the time-stamp field (Fig.5), Adams must insert the time stamp value associated with the video element in the structure at the Headend in order to perform the above function at the receiver as disclosed.

Regarding claim 2, Adams further discloses wherein the availability of the document (associated data/Buttons with images of related items for sale) is signaled by displaying the document (displays buttons with images of related items for sale; see Fig. 8);

Regarding claims 3 and 9, Adams further discloses wherein the presence of the document is signaled by displaying to the viewer a notice of the availability/command by

which the viewer can cause the document to be displayed (see Fig. 8; Col. 8, lines 64-Col. 9, lines 1)

Regarding claim 4, Adams further discloses wherein the time stamp value is encoded in a data packet with the document before the data packet is transmitted (see Fig. 5 wherein the time stamp 84 must be encoded before the data packet is transmitted; Col. 4, lines 34-65).

Regarding claim 6, Adams discloses a method of displaying (Fig.8) a document (associated data/Buttons with images of related items for sale) together with a time stamp (Fig. 5, el. 84) specified display of video element (Fig.8, Video Windows) comprising the steps of:

Providing the document (Associated Data) including a structure (Fig. 5) for receiving a time stamp value (Fig. 5, el. 84) specifying a display time for the document (Fig.5; Col. 4, lines 34-65; Col. 7, lines 15-21);

Reconstructing the document (associated data) from the first data packet (Video packet) see Fig. 8; reading the time stamp value in the document; and providing or signaling the availability of the document to a viewer and displaying the target datum of the at least one of the video element and the audio element at the display time specified by the time stamp value is described in Col. 8, lines 51-Col. 9, lines 48.

As to "Encoding in a packetized elementary stream a first data packet (video) comprising the document and the time stamp value; and Encoding in a packetized elementary stream a second packet (audio) comprising the time stamp value and a

target datum in either the video or audio element", Adams must encodes the corresponding video/audio/associated data stream into packetized elementary stream as shown in Fig. 5.

As to "capturing the time stamp value from the first data packet; Inserting the time stamp value into the structure for receiving the time stamp value", Adams does not specifically disclose it; However, Adams shows the Associated Data's structure with corresponding time-stamp field in Video/Audio/Associated packets see Fig.5 in which Adams must capture the time stamp value from the Video data packet and insert the time stamp value associated with the video element in the structure of the Associated data packet in order to synchronize the presentation of the associated data with the video data and to perform the above function as disclosed.

Regarding claim 7, Adams further discloses, wherein the availability of the document (associated data/Buttons with images of related items for sale) is signaled by displaying the document (displays buttons with images of related items for sale; see Fig. 8);

Regarding claim 10, Adams further discloses transmitting the first (Video) and second (Audio) data packets to a receiver; see Col. 4, lines 5-14.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 5 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Adams et al. (US 5541662) in view of Harrison et al. (US 6064420).

Regarding claim 5, Adams does not clearly disclose wherein the time stamp value is inserted in the structure after the document is transmitted.

Harrison discloses a script is generated from sub-system 20 and sent over the terminal to synchronize the pre-stored associate data at local storage 80 with the display (by executing the script, the pre-stored associate data at the terminal is synchronizing with the received main/primary data stream to display to viewer based on the inserted time stamp/time code value from the receiving stream; Col. 5, lines 1-18). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Adams to insert the time-stamp in the structure after the document is transmitted, as taught by Harrison, so to enhance the quality and content of the primary information stream with corresponding targeted associated data (see Summary of the invention).

Regarding claim 8, Harrison further discloses including in the document (associate data) a display time interval and terminating the display of the document (associate data) at a time specified by the display time interval and the time stamp value" (time code and time duration; Col. 5, lines 2-53).

3. Claims 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Adams et al. (US 5541662) in view of Eyer (US 5982445), and further in view of Harrison et al. (US 6064420).

Regarding claim 11, with respect to analysis of claim 1, Adams must have “a document server” for delivering the document (associate data) including a structure for receiving a time stamp value as a first data stream to a packet assembler said delivery being coordinated with the arrival of a target datum in a second data stream representing said at least one of a video stream element and an audio element; “a packet assembler” for encoding in a packetized elementary stream a first data packet comprising a data unit representing the document (associated data) and a time stamp value specifying a time for displaying the document (associated data); and a second data packet comprising the target datum and the time stamp value unit and the time stamp value”; “a packet disassembler for separating the data unit and the time stamp value from the first data packet” in order to perform the method as discussed in claim 1.

As to limitation “a parser to reconstruct the document from the data unit” and “a data presentation engine to read the document”, Adams does not clearly disclose it; However, Adams discloses a client runtime manager 102 reads incoming packets video/audio/associated packets and distributes them to corresponding functions within the receiver (Col. 8, lines 32-Col. 9, lines 10).

Eyer discloses a parser and presentation engine (browser) to reconstruct the document from the data unit (Fig. 2; element 220, 215; Col. 8, lines 44-48 and Col. 9, lines 13-21);

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Adams to include a parser and data presentation engine (Browser); as taught by Eyer; so to identify displayable objects and display instructions from HTML codes so that a browser could display corresponding HTML pages to viewers.

As to limitation "a time stamp loader to insert the time stamp value into the structure for receiving the time stamp value"; Adams and Eyer do not clearly disclose it.

Harrison discloses a script is generated from sub-system 20 and sent over the terminal to synchronize the pre-stored associate data at local storage 80 with the display (by executing the script, the pre-stored associate data at the terminal is synchronizing with the received main stream to display to viewer based on the inserted time stamp value from the; Col. 5, lines 1-18). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Adams in view of Eyer to have a time-loader (script) to insert the time-stamp in the structure after the document is transmitted, as taught by Harrison, so to enhance the quality and content of the primary information stream with corresponding targeted associated data (see Summary of the invention).

Regarding claim 12, Adams further discloses wherein the availability of the document (associated data/Buttons with images of related items for sale) is signaled by displaying the document (displays buttons with images of related items for sale; see Fig. 8);

Regarding claim 13, Eyer further discloses a storage device to store the reconstructed document (Fig. 2; element 210; Col. 11, lines 8-12) and a command device enabling the viewer to cause the display of the document (Fig. 2; element 232; Col. 9, lines 1-5 & 46-50).

Regarding claim 14, Adams further meets the limitation "further comprising a transmission and receiving system for transferring data packets to a receiver" (see Fig. 1).

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ramaswamy (US 6295647) shows context life time management of a user interface in a digital TV broadcast.

Gerba et al. (US 5931908) shows visual object present within live programming as an actionable event for user selection of alternate programming wherein the actionable event is selected by human operator at a headend for distributed data and programming.

### **Contact Fax Information**

**Any response to this action should be mailed to:**

Commissioner of Patents and Trademarks  
Washington, D.C. 20231

**or Faxed to:** 703-872-9306

(for informal/draft communications, please label "PROPOSED" or  
"DRAFT")

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive,  
Arlington, VA., Sixth Floor (Receptionist).

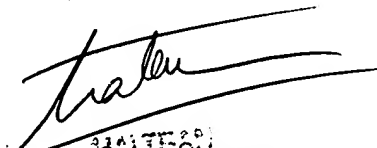

Any inquiry concerning this communication or earlier communications from the  
examiner should be directed to Hai Tran whose telephone number is 703-308-7372.

The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's  
supervisor, Andrew Faile can be reached on 703-305-4380. The fax phone number for  
the organization where this application or proceeding is assigned is 703-872-9306.

Any inquiry of a general nature or relating to the status of this application or  
proceeding should be directed to the receptionist whose telephone number is 703-306-  
0377.
